ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.*

(54) Title: A GREASE AND OIL ABSORBENT

(57) Abstract: This invention relates to a biological substance (oil absorbent) for the absorption of grease and oil. The invention is preferably used for removal of heavy oil released from ships and moreover oils, which are spilled out upon workshop floors. The invention utilizes byproducts and residual products such as bark, branches and sawdust as raw materials. The oil absorbent contains a vital component with a thin shape. The component's length is at least ten times greater than its width and its proportion makes up at least ten percent of the absorbent's total weight. Ingredients in this compound include among others Bornyl acetate, cadinene and limonene. For dispersal of the absorbent an ejector system is used together with a nozzle. This apparatus makes it possible to disperse the absorbent in different directions.
